In the Specification:

5

Please replace the Abstract with the following amended Abstract:

The invention relates to a system for browsing a collection of information units, such as audio or video files, comprising presentation means for presenting an information unit from said collection, and attribute means for associating a respective information unit with an attribute value for at least a first attribute. The system according to the invention randomly selects information units which meet certain criteria for said first attribute.

10

Recent developments in music compression, storage capacity and broad-band networks have made it possible that consumers have access to large quantities of information of various kinds. For example, a database of compressed music files may be stored on the hard disk of a personal computer and browsed and listened to by the user. Alternatively, music files may be stored on a remote server, and accessed via a computer network such as the internet. Examples of such on-line jukeboxes can be found at www.music.sony.communication/jukebox.
